

Magnetic Chocolate Moulds

imagine. print. create. your very own personalised chocolates with Edible Image Supplies magnetic chocolate moulds. Made from food grade polycarbonate and a stainless steel plate held together with strong magnets, they work perfectly with our chocolate transfer sheets. Simply line the bottom of the mould with your printed chocolate transfer sheets, assemble the mould, fill with chocolate and voila, your very own signature chocolates!

STEP 1

Print your desired image onto your Edible Image Supplies chocolate transfer sheet. Ensure you print the image onto the sheet in “mirror image” or media type “T Shirt Transfers” as illustrated below.

STEP 2

Cut the chocolate transfer sheet to the size of the mould using the steel plate as your size guide, then insert the sheet into the mould printed side down. Secure the steel plate in place, over the chocolate transfer sheet then turn the mould over.

STEP 3

Pipe tempered chocolate into each of the mould cavities.

STEP 4

Gently vibrate the mould to ensure the chocolate is evenly distributed and gently tap to remove any air bubbles. Remove the excess chocolate from the top of the mould with a scraper. Refrigerate for approx. 20mins. Once the chocolate has hardened sufficiently it will shrink back slightly from the mould.

STEP 5

Remove the backing steel plate from the mould. Remove the transfer sheet, then tap out your chocolates onto your work surface.

STEP 6

Hand wash your chocolate mould with mild detergent in warm water and towel dry. Not dishwasher safe.
